To whom it may concern,
Please reject NAB's petition 04-160 and its attempt to restrict access to local traffic and weather reports on satellite radio. I travel for work and find that being able to get traffic information quickly in the larger cities that I travel to, to be a tremendous help. I don't often know which station to tune to get local traffic information while in those locations and being able to rapidly access the information with my satellite radio is much more convenient, considering I am driving and would prefer to keep my eyes on the road rather than scanning the radio stations looking for a traffic report.

Thank you for your time.
Tom
